

ESI Mobile Messaging

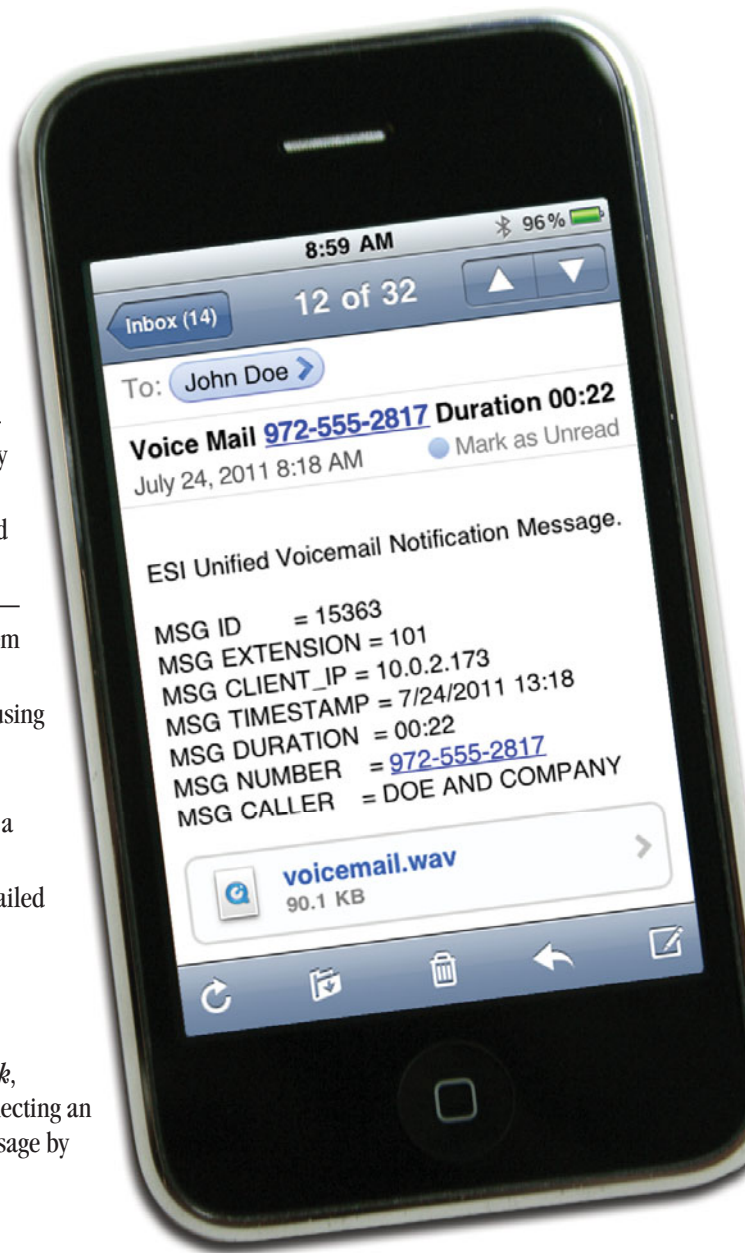

Maximizes your access to messages

ESI Mobile Messaging combines the advanced capabilities of an ESI business communications system with the convenience of your existing e-mail account. When you receive a message (a voice mail or a recording) at an extension or guest mailbox, you also receive an e-mailed notification to which a .WAV file of the message is attached. The notification's header contains information about the message — the Caller ID name and number, as well as the call's date, time, and duration. ESI Mobile Messaging also lets you quickly do these (and more):

- **Listen to a message on your PC or “smart” cell phone** — Play back a message on your PC or “smart” cell phone by simply double-clicking the attachment.
- **Share messages** — Forward important messages to interested individuals, even if they're not on your ESI system.
- **Choose which messages to handle and how to manage them** — Got numerous messages? You can directly access any one of them right away.
- **Remotely manage messages** — You can manage messages using Web mail from: a home PC or laptop; a personal (or alternate) e-mail account; or a “smart” cell phone.
- **Store important messages** — Save a message attachment to a hard drive or USB flash drive.
- **Choose one of two e-mail accounts** at which to receive e-mailed notifications of messages.

Compatible with VIP™

If you also use one of ESI's *VIP* applications in tandem with *Outlook*, ESI Mobile Messaging gives you an additional capability: simply selecting an e-mailed notification in the *Outlook* Inbox lets you handle the message by using the *VIP* toolbar.
